

Filming & Upload Guide

One page, everything your scout needs. Ten minutes per block, once per growth stage.

WHICH ROWS TO FILM

- 1 **5–10 representative rows per block.** Spread them across the block — edges ripen differently than the middle. If you hand-count certain rows every year, film those same rows so your numbers and ours line up.
- 2 **One side of each row** is enough. Walk the same side every time.
- 3 **One video per row.** Start recording at the row's start, stop at its end. Short videos upload and process faster than one long one.

HOW TO FILM — PHONE

- 1 Hold the phone **about one foot from the fruiting wire**, camera facing the vines.
- 2 **Check the zoom shows 1×** before you press record — phones sometimes remember 1.5× from your last video.
- 3 **Tap and hold on a vine on your screen** until the focus locks (you'll see "AE/AF LOCK" on iPhone) — otherwise the camera hunts for focus as you walk and frames blur.
- 4 **Walk slowly and steadily** — a relaxed stroll, not a march. Keep the phone as level as you can.

GoPro users: set **4K · 30fps · Linear lens** (not SuperView), and keep clips to about **5 rows per recording** — GoPros overheat on long recordings and quietly stop capturing, which produces blank scans. Let it breathe between clips.

TELLING US WHICH ROW IS WHICH

Any ONE of these works — pick the easiest for you:

Say it or note it

- Say the block and row aloud at the start of each video ("Block A, row 10"), or
- Keep a simple note: video filename → block + row, and include it when you upload or email us.

Optional: QR markers

- In the app, open your block's panel and expand the **QR CODES** card at the bottom.
- Print and clip a code at each row start — rows then identify themselves automatically in every future video.

UPLOADING — FROM THE PHONE YOU FILMED WITH

- 1 Open **app.cropmind.ca** in your phone's browser and sign in.
- 2 Tap your **block**, then tap **UPLOAD** on the block card.
- 3 Select that block's videos from your camera roll — you can pick several at once.
- 4 Set the **date filmed** and the **growth stage** (e.g. Veraison), then start the upload.
- 5 **Stay on the upload screen until it says done** — switching apps or taking a call can cancel it, and a cancelled upload starts over from the beginning. On slow signal, wait and upload from the house Wi-Fi; the videos keep fine on your phone.

Skip Google Drive, texts, and email attachments — the app upload is the only path that ties videos to your block automatically. **GoPro on Windows:** copy the files from the camera to the computer first, then upload from the browser — selecting multiple files straight off the camera often fails.

WHAT HAPPENS NEXT

Processing starts automatically — your block dashboard updates within hours, and your report follows once the block is complete.
